0.1 Abstract

The report is about the data collection to find out the considerations for students when choosing the different places of residence.

Different students where approached and they gave their view about why they chose their respective places of residence,how many people are approximated to be living their,the locations and other related information.

0.2 Introduction

0.2.1 Background

Data obtained from the different students is analyzed upon aggregate and general conclusions can be drawn.

0.2.2 Purpose

Data can be used to identify which hall/hostel hall the most number of students and of which category,what different categories of students opt as the best residential places and where they are located

Data can be used plan if there exists the need to establish more residential

rooms in a specific location basing on the analysis of the collected data
The research was ordered by Mr. Ernest Mwebaze a senior lecturer and course handler at the College of Computing and Information Systems in Makerere University.

Data can be used to locate the different hostels,halls of residence and homes of commuting students using the geographical coordinates.

The data also includes identifying the different rental and hostels names that accommodate students so that the can be identified and affiliated.

0.2.3 Scope

During the research there were limitations , and to some extent affected the research. Limitations include the following;

1. negative attitude from the selected individuals consulted in the data collection system.
2. Mobile network coverage was poor in some locations. ODK Collect(the application i used to collect data) requires network connection or wifi technology to upload data so at times it were impossible to upload data in real time.
3. Being questioned when taking pictures. The occupants of various places could be suspicious on who is taking pictures of property hence arise questioning.

0.3 Body

Analysis of results was based on the so far selected and visited places of residence.

0.4 Conclusion

1. Most of the major areas in Kampala among the sampled are in Nakawa division when compared to the number in other divisions.
2. Most of the areas are close when observation is based on coordinates since the difference is minute/ small
